Q1	Select the chapter you want to provide feedback on
	Ecosystems and Indigenous Biodiversity
Q2	In general, to what extent do you support the contents of this chapter?
	Strongly oppose
Q3	Objective/Policy/Rule/Standard reference:
	The protection of all indigenous woody shrub species, including matagouri .
Q4	Feedback/Comments
	<p>The Dansey's Pass has long been regarded as iconic clean tussock grassland.50 years ago there was very little woody vegetation prevalent.Photographs can verify this.It is only with the advent of ariel topdressing that these woody shrubs have proliferated,benefiting from the increased fertility.It is not the protection of an endangered native species that is occurring;</p> <p>Rather it is the promotion of one type of vegetation over and above every thing else, and in the process detracting from and altering the scenic uniqueness that this area used to have.</p> <p>I have a pocket of bush that I am willing to protect at no cost to anybody, and no external administration required.In saying that I would like to point out that DOC has a large holding in this area,so one would assume that any endangered native species would be getting adequate protection; after all that was the premise when they acquired that land.</p> <p>If I offered to set aside and protect an area of bush,I would like to be able to control invasive woody vegetation on more productive land that did not use to be dominated by that type of vegetation.</p>
